COMP7610
Introduction to Web3 and Blockchain

Final Project
Build a Decentralized Application (DApp)

What Is a DApp?

- **Frontend Interface** : Built with HTML, CSS & JS (React, Vue or Vanilla JS) for user interaction.
- **Smart Contract Backend** : Decentralized logic running directly on the blockchain network.
- **Blockchain Libraries** : Use Ethers.js to bridge frontend and blockchain.
- **Crypto Wallet** : MetaMask or similar tools for account management & signing.
- **Core Requirement** : Must execute at least one meaningful on-chain operation (e.g., transactions).
- **Testnet: Sepolia** (Other Ethereum testnets are acceptable)

Submission

- **Group submission (one submission for each team)**
  - Demo Video: within 15 minutes, present the story/idea you have, clearly showcasing core functions and live demonstration. (Submit Presentation Slides if you have.)
  - Format: MP4 / MOV (high-resolution video)
  - Language: English
  - Project Report: PDF format, covering background, idea, design, implementation, and Contribution distibution
  - Code Repository: Including complete runnable source code and detailed README documentation.
- **Personal submission (one submission for each student)**
  - Peer assignment

Group Formation

- Team Size & Structure
  - 4-5 students per team; free to form groups voluntarily.
- Key Rules & Expectations
  - Define clear roles/responsibilities; every member must contribute.
  - Deadline: Sep18, Fri.

for team forming

Important Dates

Date	Task
Sep 14 (Mon)	In-class Project Clarification
Sep 18, 14:00 PM	Group Formation Deadline
Nov 8, 11:59 PM	Final Project Submission

Note: Please manage your time effectively to ensure timely submission.
